

Vistara – Booking & GDS Policy

Dear Travel Partner,

Vistara (UK), in its efforts to reduce distribution costs and minimize the unproductive costs associated with distribution of its services, would like to inform all concerned that we will implement the following booking and ticketing policy with immediate effect. This policy shall be applicable to all travel service providers who are authorized to create bookings and/or issue tickets on UK flights.

UK hereby reserves the right to audit all relevant booking and ticketing transactions to identify all non-compliant booking and ticketing practices. We enforce this policy via a range of internal and external audit services including (but not limited to) Revenue Integrity, BIDT Audit and Sales Audit.

This policy is subject to change anytime upon intimation from Vistara.

1. BOOKING PRACTICES

This section outlines a few non-compliant booking practises that are audited by Revenue Integrity (RI) .There are a number of other non-compliant booking practises, which UK does not allow, and which if identified will be penalised.

- | | |
|----------------------------|---------------------------|
| a. DUPLICATE BOOKINGS | f. TICKET QUALITY |
| b. MINIMUM CONNECTION TIME | g. WAITLIST REMOVAL |
| c. FICTITIOUS BOOKINGS | h. INCOMPLETE ITINERARIES |
| d. NAME CHANGES | i. NO-SHOWS |
| e. TICKET TIME LIMITS | |

A description of these non-compliant practises is given below, along with the automated actions that UK will carry out on PNRs identified as having these booking discrepancies.

Duplicates

The travel service provider should not create duplicate bookings in the same or different PNRs. Duplicates include booking the same passenger confirmed/re-confirmed on same or different flight, class, date or route where it is not possible for the passenger to travel simultaneously. This aims to reduce the costs associated with inactive segments and other booking related practices, which cause negative inventory consequences.

The automated RI audit will check all passenger segments within every PNR for duplicates, which might exist in the same PNR or different PNRs. These checks occur right through the booking lifecycle, from creation through each change up until departure.

As part of RI audit process duplicate PNR's if detected will be cancelled.

Minimum Connection Time

The travel service providers must adhere to Minimum Connection Time (MCT) while booking onward connecting segments. Bookings with MCT below the published time should not be created. This policy aims to improve On-Time Performance (OTP) and to minimise misconnections for the benefit of the travellers.

The automated RI audit will check all transfer segments (i.e. those with feed or discharge segments in the journey) to identify bookings found to have connections outside of valid MCT.

Name Changes

A name change means that the person travelling is replaced by another person. Changes of family name or first name are thus not permitted within the same PNR. Hence, if a change is needed it is always recommended to create a new booking post cancelling the original PNR, based on current availability. The original unused ticket may be refunded according to fare rules and a new ticket is to be issued as per the actual applicable fare.

Ticket Time Limits

Travel service provider must adhere to ticketing time limit and ensure that booking is either ticketed or cancelled before expiry of ticketing time limit. Though, UK has an automated program to cancel segments when ticketing has not occurred by the applicable Ticket Time Limit, however, the Travel Service Provider is responsible to ensure that any un-ticketed PNR is cancelled within the time limit.

Ticket Quality

Travel service provider must report genuine ticket numbers that is valid for travel on associated PNRs. UK does not allow the use of fictitious or duplicated ticket number. Any PNR having inappropriate ticket number will be cancelled.

Waitlist Removal

Travel service provider must not repeatedly create waitlist segments. Such bookings do not increase chances of confirming, however results only in higher booking volumes and increases GDS cost. Also ensure to remove waitlist segment from active PNR at least 24 hrs. prior to departure.

Incomplete Itineraries

It is not permitted to make reservations different from the passenger's real itinerary including fictitious segments with the aim to undercut the applicable fare. This includes booking and issuing round-trips for the purpose of one-way use or partial travel only as well as amending itineraries without passenger request.

No-Shows

Travel service provider must avoid ticketed or un-ticked No-Show, whenever passenger misses his flight or when a Travel Agent fails to cancel a booking will eventually leads to inventory spoilage. Un-ticketed segments which result in no-show may also incur a No-Show fee.

A no-show occurs when the Travel Agent fails to cancel a booking that is not required by the customer, which eventually leads to inventory spoilage. Failure to cancel a redundant ticketed or un-ticketed reservation in due time may result in a no-show.

Other Controls on Inventory Wastage

- The travel service provider should never create any booking/transaction for achieving GDS incentive targets.
- Travel service providers that use more than one GDS must book and ticket a specific passenger itinerary within the same GDS.
- The travel service provider must always undertake appropriate timely actions for any un-ticketed bookings or cancellations from customers.
- Travel service provider should not create any fictitious bookings (testing or training bookings) that blocks UK's inventory in the live mode.
- Training environment is provided by all GDS, so agents must use Training mode for testing purpose. It is not recommended to create PNR's for training purpose in Production mode.
- Itinerary segment status resulting in inactive segments require action at least 24 hours prior to flight departure. This includes cancelling ticketed/ un-ticketed segments with a status code of UN, NO, HX, WK, WL, or WN. In addition, timely cancellation of unnecessary segments in PNRs with the following status codes: UC, US and DS is required.
- Redemption classes (I, X) must not to be sold by travel service provider.

Minimizing GDS Costs

- Travel service provider should avoid repeated cancellations and rebooking the same flight ("churning") to manipulate the ticket time limit. Any passenger booking seen more than 3 (three) times will be liable for cancellation of all existing bookings, with appropriate cost recovery.
- Travel service provider must use the GDS itinerary pricing function instead of creating a PNR with active/non-active segment merely for performing fare quotations.
- Travel service provider shall ensure there is no additional booking fee generated from GDS migration, such as extra cancellation or duplicate booking activities. Travel service provider must use GDS "Bridge and Branch" or "PNR queue" function to access the active PNR in the same GDS for ticketing purpose.
